

PATHFINDER...More Than Mapping

Honeywell

WHAT ARE YOUR NEEDS...

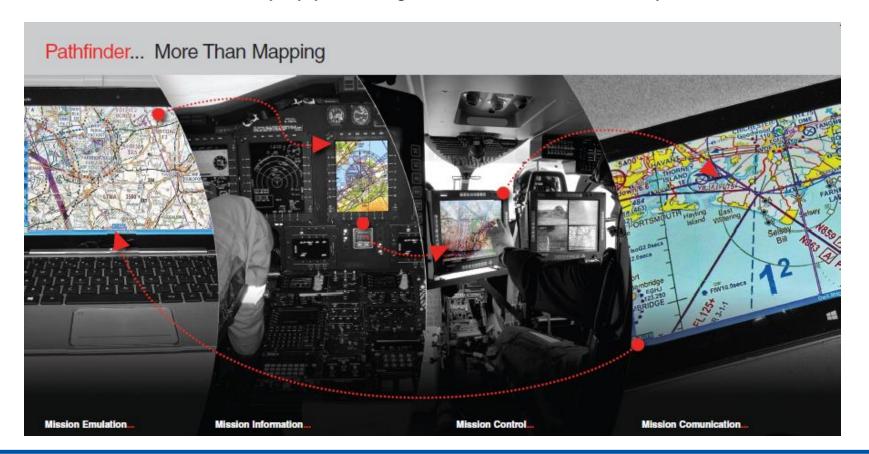

- Developing a new platform, do you need a tactical mission system?
- You have a Sentinel or Observer and need a training platform?
- Wish to be able to interface to aircraft from tablet to platform?
- Want to enhance your own mission product capability?

WHAT WE CAN OFFER...

- A software platform that is adaptable, scalable and platform agnostic
- A software team that can work with you to provide solutions
- A solution that is supportable from an Aerospace Leader
- A significant reduction in your development costs
- Call +44 (0)1243 783763 or email <u>mission.systems@honeywell.com</u>

APPLICATION RANGE

You are limited only by your imagination, Pathfinder can be your solution.....

- Pathfinder, is a suite of software that offers a solution to your tactical mapping needs, we bring all the functionality of Honeywell's in service proven and certified Sentinel and Observer Software to your mission hardware platform at a fraction of the time and cost of a bespoke solution.
- With our extensive experience of providing intuitive systems and a range of options covering every type of scenario, Pathfinder is the logical choice. Not only do you get a mapping and if required a sensor interface package that works from the first install, you get the technical support of an established team who have extensive knowledge in the field.
- With scalable resolutions from VGA to HD and code that can be certified to the level required for your application, we can offer a package to suit your display needs and budget. Couple this with our ability to provide custom mapping packages and you have a one stop shop for your mission needs

APPLICATIONS

- Embedded Processors (Partitioned Operating Systems)
- Smart Mission Displays (Embedded Operating Systems)
- Tablet PC's (Windows 7 and 8 Operating Systems)
- PC Based Training Emulation
- Tablets (NOT AVAILABLE)

ROLES

- Pathfinder can run on Smart Displays or Utility Graphics
 Cards as part of integrated platform avionics.
- Pathfinder also offers a new way to look at your mission and training needs, it offers an entirely flexible solution that can be configured to the platform or task.

TECHNICAL INFORMATION

Pathfinder as an application is intended to run on almost any commercial or airborne certified operating system with only minimal changes. The application runs as a single process, with a regular interrupt provided by the operating system, the type of interrupt being configurable to the selected operating systems.

TECHNICAL SUMMARY

- Pathfinder runs efficiently on a processor clock speed of greater than 1GHz
 and a minimum of 256MB of RAM
- Pathfinder requires access to a large amount of stored mapping (Gigabytes)
 and data sets that can be accessed quickly.
- Pathfinder requires control from input devices the source can be touch screens, controllers, or cursor control devices as required by the application.
- Pathfinder can be configured to receive data from many different external devices, the software configures this data into a common format.
- Pathfinder software is designed to RTCA DO178 Level D, but when running on a third party commercial operating system will be Level E;
- Higher levels of certification for specific applications can be supported.
